Methodology: Doctor's Professionalism

Aim of the Study: To determine the impact of doctors' professionalism on patient satisfaction.

Methodology:

- Sample Size: 500 patients
- Data Collection: Surveys and interviews
- Data Analysis: Descriptive statistics and regression analysis

Limitations:

- Self-report data may be subject to bias
- Sample may not be representative of the general population

Conclusion:

Doctors' professionalism has a significant positive impact on patient satisfaction. Implementing measures to improve doctors' professionalism can lead to increased patient satisfaction and ultimately better healthcare outcomes.
